

**Project Title:**

MShop Online Store

**Introduction:**

This website is a buying and selling platform which provides an easy interface for both customers and the shop owner. The goal of this website is to make online shopping a delightful experience from both ends.

This site will bring satisfaction to both customers and retailers.

**Features:**

Provide an easy to use interface along with user-friendly cart and checkout system for customers and user interface for the administrator who will be the retailer to add or remove products along with product categories. There will be a chat system for customer support also.

User-friendly Interfaces make everything easy to use for customers to choose and buy. Besides, there will be an interface for the administrator so that the retailer will not need to interact with the database directly.

**Market Survey:**

five websites that might have similar ideas as mine would be oilco, priyoshop, carolinezhurley, twochimpscoffee, buffy.

All of them are user-friendly online shopping sites. "Mshop Online Store" will most likely be similar to oilco. Because oilco shows products fantastically on the home page.
